

**Ivanplats files NI 43-101 Technical Report for the updated  
independent resource estimate  
on the Platreef PGE-nickel-copper project  
on the Northern Limb of South Africa's Bushveld Complex**

**JOHANNESBURG, SOUTH AFRICA** – Ivanplats today announced the completion and filing of a National Instrument 43-101 independent Technical Report that updates the independent resource estimate on its Platreef Project, a major PGE-nickel-copper discovery on the Northern Limb of the Bushveld Complex in South Africa. The Technical Report supports the company's February 6, 2013, news release that outlined a major expansion and upgrade of the project's previously declared underground mineral resources.

The independent Technical Report was prepared by AMEC E&C Services of Reno, Nevada, in accordance with CIM Definition Standards and Best-Practice Guidelines and National Instrument 43-101 standards, under the direction of Dr. Parker and Timothy Kuhl of AMEC.

The report – titled Platreef Project NI 43-101 Technical Report on Updated Mineral Resource Estimate, March 2013 – has been filed on the SEDAR website at [www.sedar.com](http://www.sedar.com).
